

Slack bot — install in 10 minutes

Turns on the **Send PDF to Slack** button in `/app/pmo` so plans land in `#ai-pmo-plans` as VCL-branded PDFs.

What you're setting up. A Slack app named *VCLPMO Bot* with two bot scopes (`chat:write` + `files:write`) installed to the Vimit Converters workspace. Its `xoxb-...` token goes into Frappe Cloud's `site_config`. The PMO page uses Slack's external-upload flow to render any plan as a VCL-branded A4 PDF and post it into `#ai-pmo-plans` (channel ID `C0B5DA141MM`).

01 Create the Slack app

Go to api.slack.com/apps → **Create New App** → **From scratch**. Name it *VCLPMO Bot*. Pick the *Vimit Converters* workspace as the development workspace.

02 Add bot scopes

In the app sidebar → **OAuth & Permissions**. Under *Scopes* → *Bot Token Scopes* add both: `chat:write` (post the initial comment) and `files:write` (upload the PDF). Save.

03 Install + copy the token

Top of the same page → **Install to Workspace** → **Allow**. Copy the *Bot User OAuth Token* — it starts with `xoxb-...` Keep it on screen.

04 Invite the bot to the channel

In Slack, open `#ai-pmo-plans` and type: `/invite @VCL PMO Bot`. Confirm. The bot must be a channel member or `files.completeUploadExternal` returns `not_in_channel`.

05 Drop the token into Frappe Cloud site_config

SSH to the Frappe Cloud bench shell (or use the Bench → Site → Site Config UI). Run:

```
bench --site vimitconverters.frappe.cloud set-config pmo_slack_bot_token "xoxb-..."
bench --site vimitconverters.frappe.cloud set-config pmo_slack_plans_channel "C0B5DA141MM"
```

The second line is optional — the default already points to `#ai-pmo-plans`.

Verify + troubleshoot

Open any plan in `/app/pmo` → click **Send PDF to Slack**. A green toast with a Slack permalink means it worked.

TOAST SAYS	WHAT IT MEANS / FIX
<code>pmo_slack_bot_token not set</code>	The <code>site_config</code> key is missing. Re-run step 5.
Slack post failed: <code>not_in_channel</code>	Bot isn't a member of <code>#ai-pmo-plans</code> . Re-run step 4.
Slack post failed: <code>invalid_auth</code>	Token was revoked or is the wrong type. Must be <code>xoxb-...</code> (Bot User), not <code>xoxp-...</code> (User).
Slack post failed: <code>getUploadURL</code>	Network egress from Frappe Cloud is blocked, or <code>files:write</code> scope is missing. Re-check step 2.
